

Word gets out

At the Paris summit, most notably President **Obama** referred to “**renewables** even being **cheaper** in some parts of the Country” - word got out. Thank you Mr. President!

And, since 2015, the world goes for renewables:

Fraction of Renewable Energy in the Growth of Global Energy Capacities 2001-2020

New global power generation capacity in 2020 was 80% in renewables, mainly PV and wind

Our take-home-message?

“Cheap renewables - the solution to the climate crisis @ our finger tips!”
